

Faster, smarter integration, now.

Get your data integration and EDI projects up and running faster, with less risk and for less cost than ever before.

Data integration and EDI projects can deliver significant ROI, but traditionally these projects have been expensive, risky and time consuming.

Flow offers a new approach to integration that cuts the time, cost and risk of custom integration. Flow requires no development instead it delivers custom solution that perfectly fits your business by simple configuration.

Flow is a software nerve centre that transparently links your business systems, whether they're internal, web-based or customer-side applications. As your business grows and business systems are upgraded Flow remains a connecting point. Flow is flexible and scalable to grow with you!

Get immediate savings and rapid ROI

Quick Facts:

- More than 200 installations Australasia-wide
- More than 100 business applications integrated including more than 30 accounting and ERP applications
- Supports all mainstream EDI formats
- Requires days, not months for installation and set-up
- No software development
- Configurable templates
- Scalable to grow with your business
- Handles thousands of real-time transactions per minute

“ ... it used to take two days to key in orders. With Flow it is down to 5 minutes”

John Hall
Wilson Consumer Products Finance and Administration Manager

Flow Will Benefit Your Business

These are some examples of how Flow may benefit your business.

CRM

Stream sales orders from your CRM system to your financials & synchronise customer account data between multiple systems

EDI

Enable seamless EDI transactions with your supply and distribution partners within days.

Web site/e-commerce

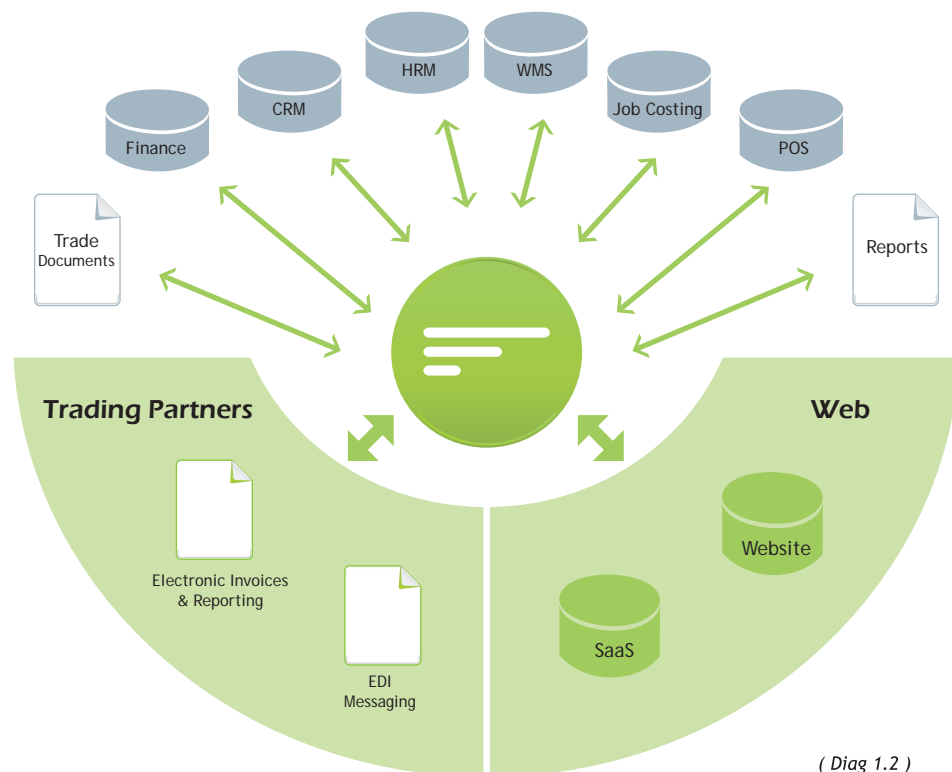

Ensure online product catalogues match stock holdings in real-time and orders are processed and invoiced with no re-keying involved.

Hosted applications

Seamless data flow between hosted (SaaS) applications and your in-house systems.

Mobile workforce applications

Manage data transfer to and from mobile devices and your internal systems.

* Flow transfers and transforms data transparently between all your business systems internal and external (Diag 1.2)

(Diag 1.2)

The Flow Advantage

No development needed

With Flow, no programming is required, just configuring. Compared to traditional bespoke integration approach, Flow projects can be completed:

- ✓ faster
- ✓ at less cost
- ✓ with less risk

And since Flow complements your existing IT infrastructure, there's no need for expensive, complex and risky system upgrades.

Capability

With already more than 100 applications (including more than 30 accounting and ERP solutions) integrated using Flow, the hard work is already done.

Flow works across an unlimited number of applications and trading partners.

Flow is powerful enough to handle thousands of real-time transactions per minute.

Adaptability

Flow can be configured to meet your unique business process requirements.

Flow is scalable to fit your business now and as it grows.

Improved business agility

By building Flow into your existing infrastructure and retaining your existing independent applications you can upgrade or replace one application without affecting integration set-up.

Dependencies are confined within the single application being changed. Project scope, timeframe and impact are minimised.

Experience and focus

Integration is all we do.

We understand the challenges of both in-house and SaaS integration.

With more than 100 applications integrated and more than 200 Flow sites, we have the best expertise available locally.

Low total cost of ownership

Flexible licensing options, minimal set-up time, and application reliability mean a sound investment in integration and EDI solution.

“We wanted a simple solution that we could control; providing more accurate and faster order placement and fulfillment. We wanted to deliver a better service, and save money. Flow has allowed us to do that.”

Richard Barnett
Manager & Director , Computer Food

"Flow Professional Services staff always provide timeframes, and when they undertake to do something for us, they give us the results and follow up. We are in no doubt that we are cared for."

Cate Langley
Director & Financial Controller,
Scenic Cellars

Flow Company

Flow Software Limited is an innovative software company that specialises in designing, developing and supporting middleware integration and EDI technologies. This is complimented by consultancy, implementation and training services for its customers and business partners.
